

The source file needs clear cleanup rules

A small fictional inventory export shows the kind of issues a client can see before delivery.

Raw export excerpt

30 source rows

SKU	Item	Count date	Qty	Note
INV-1001	Packing tape	2026-01-04	42	Extra spaces
INV-1005	Shipping label	01-17-2026	240	Mixed date
INV-1005	Shipping label	2026-03-21	240	Duplicate SKU
	Sample carton	2026-03-22	12	Missing SKU
INV-1017	Pallet jack wheel	03/14/2026	-2	Keep and flag

The delivery starts with a copy of the source file and a written rule for each issue.

No customer reviews or business claims appear in this sample. The rows and product names are fictional.

Visible issues

- Duplicate key
- Blank key
- Mixed date formats
- Negative quantity

A cleaned copy keeps the numbers traceable

The sample separates records ready to use from rows that need a source decision.

30

source rows

27

cleaned rows

3

held out of totals

Reconciliation

Raw stock value	\$3,640.05
-----------------	------------

Cleaned stock value	\$3,591.60
---------------------	------------

Difference	\$48.45
------------	---------

Cleaned snapshot

- Trimmed spaces in valid records
- Standardized dates for the cleaned copy
- Kept the first valid row for each SKU

The negative quantity stays at -2. The sample flags it instead of inventing a correction.

The delivery makes unresolved records easy to find

A client receives a cleaned copy, an issue list, and notes that explain what needs confirmation.

Changed in the cleaned copy

Extra spaces
Mixed date formats
Repeated valid SKU rows kept once

Kept for confirmation

Duplicate SKU rows
Blank required SKU
Quantity of -2

Delivered files

Cleaned workbook
Issue list
Count and value checks

Scope for this demonstration

One fictional inventory file. No accounting advice, data enrichment, or business decisions.

How it was made

AI-generated demonstration. No human review claim. A client should confirm source decisions before using the cleaned file.
